

# Foam Systems Protect Montecito Homes From Fire

September 14, 2009

Santa Barbara Homes Protected by Foam

FOAMSAFE™ Systems Protect Homes During Recent Wildfires

Consumer Fire Products, Inc. announced another successful deployment of its products in the Santa Barbara area. For a second time, its FOAMSAFE Mobile Systems were deployed to protect structures in Montecito from raging wildfire.

“When you buy or build a house you get insurance, factor in the costs of maintenance and repair, taxes, landscaping etc... After living through my first wildfire, the Tea Fire of 2008, now I would never consider home ownership without a FOAMSAFE System from Consumer Fire Products. To me it is unthinkable not to protect my most important investment to the fullest extent possible.” said Sarah from Montecito, whose parent’s home was protected by the system in both the Jesusita and TEA fires.

The FOAMSAFE FireMaster™ Series is a fully automated, self-contained, exterior fire protection system that affords property owners the opportunity to help protect their most valuable assets from the threat of wildfires, whether they are at home or not. Sensing an approaching fire, the system quickly activates, spraying fire fighting foam over structures and surrounding property.

The FOAMSAFE FireMaster Series:

1. Scans the horizon around the clock, automatically detecting fires occurring up to a half-mile away.
2. Automatically disperses safe, fire fighting foam on structures and surrounding property.
3. Utilizes its own water and power sources.
4. Calls up to four pre-programmed phone numbers immediately upon activation.
5. Activates remotely from anywhere Internet access is available. In-house system monitoring and notification packages are also available.
6. Requires no clean-up, thanks to the foam’s EPA-rated safe, biodegradable composition.

Various insurance brokers have approved FOAMSAFE Systems, and Consumer Fire Products, Inc. is currently working with Chubb Insurance to become a Preferred Provider of Exterior Fire Protection Systems. A property with a FOAMSAFE System installed can receive up to 25% off annual fire insurance premiums.

CFPI was founded in 1998 by firefighters with over 30 years of wildland fire experience. A working partnership with Siemens Energy and Automation ensures that CFPI is a front-runner in highly advanced, reliable fire technology solutions. Tyco Inc. also recommends the system to homeowners. CFPI is proud to be recognized by both USC (University of Southern California) and CCC (Chemetka College, OR) for their cutting edge advancements in fire technology. More information can be found on their website at [www.consumerfireproducts.com](http://www.consumerfireproducts.com) , or by calling 1-866-901-CFPI (2374).
